Guidelines for Peanuts

Fall Application: 32 ounces per acre *Soil Solution (Nitrilease RC)*: This application should be made in the Fall, and incorporated, or up to planting in the Spring.

Designed to enhance digestion of crop residue and increase microbial activity

At Planting: Hopper Box Seed Treatment; Apply *Seed Coat (formerly Grow Coat)* @ 2 to 3 Oz (dry weight)/acre. *Seed Coat* is to be applied at a rate of four ounces per 50 pounds of seed as a standard rate.

Designed to stimulate micro-flora in the rhizosphere immediately adjacent to seed, and enhance seedling root development and stand establishment

Option # 1. **In-Furrow** apply *Percplus (Plant Power)* @ 8 ounces and *Calcium Plus* @ 16 ounces.

Option # 2. **Knifed into Seed Bed Early:** (6 x 6) Apply *Calcium Plus* at 32 ounces, *Percplus (Plant Power)* @ 16 Oz/acre and *Boron Plus* @ 8 Oz/acre in 5 gallon total volume.

Either option is a Starter Program that will reduce or eliminate Lag Phase, enhance root development, and hasten final crop maturity.

Seedling Foliar: Apply foliar *Percplus (Plant Power)* at 24 ounces broadcast.

NOTE: Add *Calcium Plus* @ 32 ounces with *Boron Plus* @ 4 ounces to this application if not applied in Option #1 or #2 above.

Designed to enhance root development and reduce Lag Phase in seedling development

Most critical application to enhance yield!

Initial Pegging: Apply foliar *Calcium Plus* @ 32 ounces per acre tank mixed with *Nutri K* @ 32 ounces, *Boron Plus* @ 4 ounces and *Percplus (Plant Power)* @ 8 ounces per acre.

Mixing: Always dilute *Nutri K* in water first, and follow with other ingredients in listed order to avoid excessive foaming.

This application will enhance development of root system, increase leaf surface, reduce the potential for Hollow Heart, and aid in overall crop development.

Initial Bulking: Apply foliar *Calcium Plus* @ 32 ounces, *Nutri K* @ 16 ounces, and 4 ounces of *Boron Plus* on weekly intervals for Two to Three applications.

This application will enhance the sizing process and generate more uniform bulking.

These **DeltAg Guidelines** have been utilized to enhance overall crop performance and are not intended to be utilized as a replacement for basic and customary fertilizer applications.
