# Guidelines for Tobacco

**Preplant Soil Application:** 24 ounces per acre *Soil Solution (Nutrilease RC)*: This application should be made in the Fall, and incorporated, or up to planting in the Spring. For No-till or over a growing crop, increase rate to 32 ounces per acre.

*Designed to increase microbial activity and enhance digestion of crop residue.*

**Transplant Water:** Apply 8 ounces of *Percplus (Plant Power)* per acre.

*Designed to reduce Lag Phase in root establishment after transplant*

**Setting Foliar:** After initial shock of transplant (4-5 days); Apply *Percplus (Plant Power)* @ 16/acre.

*Field experience has shown this application to be beneficial in building tolerance to disease and enhancing quality.*

**Five Weeks Before Topping Spray:** Apply foliar *Nutri K* @ 32 ounces, *Calcium Plus* @ 16 ounces, *Percplus (Plant Power)* @ 8 ounces, and *Boron Plus* @ 4 ounces per acre on weekly intervals for three to four applications. **NOTE:** Some growers have found benefit in the addition of *Magnesium Plus* at 16 ounces and increasing the *Calcium Plus* to 32 ounces in this mix.

**Mixing:** Always dilute *Nutri K* in water first, and follow with other ingredients in listed order to avoid excessive foaming.

*Designed to enhance quality, generate more tolerance to disease, and more uniform maturity*

**After Topping:** Foliar *Nutri K* @ 32 ounces per acre.

*Designed to aid in final quality and even out maturity*

These **DeltAg Guidelines** have been utilized to enhance overall crop performance and are not intended to be utilized as a replacement for basic and customary fertilizer applications.
