# Guidelines for Wheat

**Preplant Soil Application:** 24 ounces per acre *Soil Solution (Ntrilease RC)*: This application should be made in the Fall, and incorporated, or up to planting in the Spring. For No-till or over a growing crop, increase rate to 32 ounces per acre.

*Designed to enhance digestion of crop residue and increase microbial activity.*

**Hopper Box Seed Treatment:** Utilize where enhanced emergence and survival are desired. Apply *Seed Coat (formerly Grow Coat)* @ 2 Oz (dry weight) per planted acre of seed.

*Designed to stimulate micro-flora in the rhizosphere immediately adjacent to seed, and enhance seedling root development and stand establishment.*

**Fall Application:** Foliar apply *Percplus (Plant Power)* @ 24 ounces per acre broadcast.

**NOTE:** This application should be made in the fall, at least three weeks before wheat goes into dormancy.

*Designed to enhance root development and tillering*

**Early Spring Application:** Foliar apply *Percplus (Plant Power)* @ 24 Oz/acre broadcast.

**NOTE:** This application should be made after wheat starts to green up.

*Designed to enhance root development, tillering, early growth, and improve response to applied fertilizers*

**\*\*Early Boot (Flag) Application:** Foliar apply *Nutri-K* @ 32 ounces

*Boron Plus* @ 4 ounces

*Percplus(Plant Power)* @ 8 ounces and

*Copper Plus* @ 6 ounces per acre broadcast.

**NOTE:** May be applied with fungicide.

**Also:** Many years of tissue testing have indicated the need for potassium at this stage of development. About 30% of samples have called for zinc at this same stage. The addition of *Zinc Plus* @ 16 ounces in this combination will suffice if zinc deficiencies are suspected.

**The *Copper Plus* may be omitted if disease is not a threat.**

*Designed to enhance crop tolerance to disease and enhance grain development*

**Mixing:** Always dilute *Nutri K* in water first, and follow with other ingredients in listed order to avoid excessive foaming.

*These DeltAg Guidelines have been utilized to enhance overall crop performance and are not intended to be utilized as a replacement for basic and customary fertilizer applications.*
