

Boron Plus RATE CONVERSION CHART

Research and field experience have proven ***Boron Plus*** to be a very effective source for Boron, due to the permeability and mobility of this product in higher plants. The company standard for ***Boron Plus*** has always been based on **crop response** to one pound of dry soluble 20.5% Boron materials.

The standard has been 4 fluid ounces of ***Boron Plus*** to match or surpass the active response of one pound of dry materials in solution.

This standard has more to do with the inefficiency of the dry material (even when dissolved) than with the efficiency of ***Bororn Plus***.

It should also be noted that the more dry 20% Boron per acre is applied per application, the less efficient the response for each additional pound.

We have therefore developed the following chart for rating purposes based primarily on field experiences over 12 years.

DRY 20.5% MATERIALS (LBS. PER ACRE)	<i>Boron Plus</i> (FLUID OZ. PER ACRE)
1.0	4.0
1.5	5.5
2.0	7.0
2.5	8.5
3.0	10.0
3.5	11.5
4.0	13.0
4.5	14.5
5.0	16.0

***BORON PLUS Maximum Applicable Rate: 20 OUNCES/ACRE**
