

# The **about** Truth **Biostimulants**

**Biostimulants** are products that aid a plant or soil in performing its physiological processes in a more efficient manner for the environmental conditions that are present.

In other words ... a **Biostimulant** does just what it says; it stimulates the biological processes in the soil or in a plant. Our **Biostimulant Chemistry** is based on the use of specific **vitamins, amino acids, enzymes and natural plant extracts** which are formulated in ratios and concentrations which have been found to enhance plant metabolism.

A key factor in the successful application of this chemistry is the utilization of our proprietary complexer **Fulvore™**; functioning similar to Fulvic Acid, which improves membrane permeability and translocation. Every phase of the biological processes of crop development is important to the end result. **DeltAg Formulations** offers **Biostimulant** products to assist the plant at each critical stage of its development.

## *Did You Know?*

**PercPlus** is a great way to reduce stress on young crops. **PercPlus** gives a jump start to seedlings with early GROWTH and a STRONG root system. PROTECT your crop with **PercPlus**. Check out this ENERGIZING product.

**PercPlus** may be

1. Applied to the Seed
2. Applied In-Furrow
3. Applied to Seedling Crops
4. Applied as a Foliar with Pesticides
5. Applied with Fungicides to Enhance Disease Tolerance
